Front End Developer Assignment

Thank you for the time you're investing into our recruitment process. This is the technical challenge which I'd like you to complete. Where you do Google / StackOverflow resources, please cite them.

Please pick **either** question 1 or 2 to complete for the assignment. Regardless of how the site has been implemented, everything must be completely responsive, which means working from a resolution of 320 pixels in width. You should mainly use frameworks and/or libraries, but we will also be interested in seeing your own approach. You have 16 to 24 hours to complete the assignment. If no completion date has been agreed with you, try to complete the code within a week. Place your code on GitHub or a similar service and send us the link to your repository where we can find both the source code and the compiled version.

Question 1

Build the home page and the contact page shown in the design. There is an Instagram feed on the home page and this must display the most recent photos from the Wilderness Culture Instagram account (https://www.instagram.com/wilderness_culture/) or a suitable account of your choice. The contact form must feature validation; it must not be possible to send the form until all the fields have been correctly filled in. The details do not actually have to be sent anywhere.

Question 2

Build all the pages and functionality shown in the design as a web app. This means that routing etc., must be handled on the client side. There is an Instagram feed on the home page and this must display the most recent photos from the Wilderness Culture Instagram account (https://www.instagram.com/wilderness_culture/). The contact form must feature validation; it must not be possible to send the form until all the fields have been correctly filled in. The details do not actually have to be sent anywhere.

Bonus

Add something unique that you feel would be valuable.
